DaVinciGraph white paper v1.3

"Introducing DaVinciGraph: An NFT platform on Hedera Hashgraph"

Abstract:

DaVinciGraph is a decentralized NFT platform built on the Hedera Hashgraph. With DaVinciGraph, users can trade NFTs securely and efficiently.

Table of Contents:

The world of non-fungible tokens (NFTs) is growing rapidly, but current NFT marketplaces are limited by high fees, slow transaction times, and limited accessibility. DaVinciGraph aims to change this by building a decentralized NFT marketplace on the Hedera Hashgraph. Hedera Hashgraph offers fast, secure, and fair distributed ledger technology, making it the perfect choice for our NFT marketplace.

2. The DaVinciGraph platform

With DavinciGraph, users can trade NFTs quickly and securely, without worrying about high fees or slow transaction times. Our platform also offers exclusive features, such as the ability to create launchpads for NFTs, concert tickets, and coupons for businesses. To access these features, users need to use the OM token, our utility token. The OM token serves several key functions within DaVinciGraph, providing users with a convenient and seamless way to use the platform.

3. DaVinciGraph Utility NFTs

In addition to the standard NFTs available on DaVinciGraph, we also have DaVinciGraph Utility NFTs. These NFTs offer holders discounts on all trades in the DaVinciGraph marketplace.
Holding a DaVinciGraph Utility NFT also grants users access to exclusive features and events on the platform. These include early access to limited edition NFTs, invitation-only auctions, and special events hosted by DaVinciGraph.

4. The OM token

As mentioned earlier, the OM token serves as a utility token within DaVinciGraph. Users need to use it to pay for fees and access exclusive features, such as creating launchpads for NFTs, concert tickets, and coupons for businesses.
The OM token can also be traded on external exchanges, providing liquidity and value for our users.

5. Conclusion:

DaVinciGraph is the future of NFT trading. Our decentralized, efficient, and accessible platform built on Hedera Hashgraph offers users unique benefits and exclusive access with DaVinciGraph Utility NFTs and the OM token.
